

# 1.9 Controlling and Monitoring the Simulation

Once the VeriStand project has been successfully deployed, we can control and monitor the simulation. Open the **Workspace** file, *Three Phase Rectifier.nivscreen*, from the **Project Files** tab in the VeriStand Editor to view the user interface. Manipulate the **Sinewave Frequencies**, as well as the **Amplitude** and **Phase** of each Sinewave generator to view the results in the Waveform graphs.
